

INFRASTRUCTURE

a lunch-and-learn at AeroFS

OVERVIEW

- Architecture goals, design, and tools
- Elasticsearch and Kibana
- AWS Lambda and API Gateway

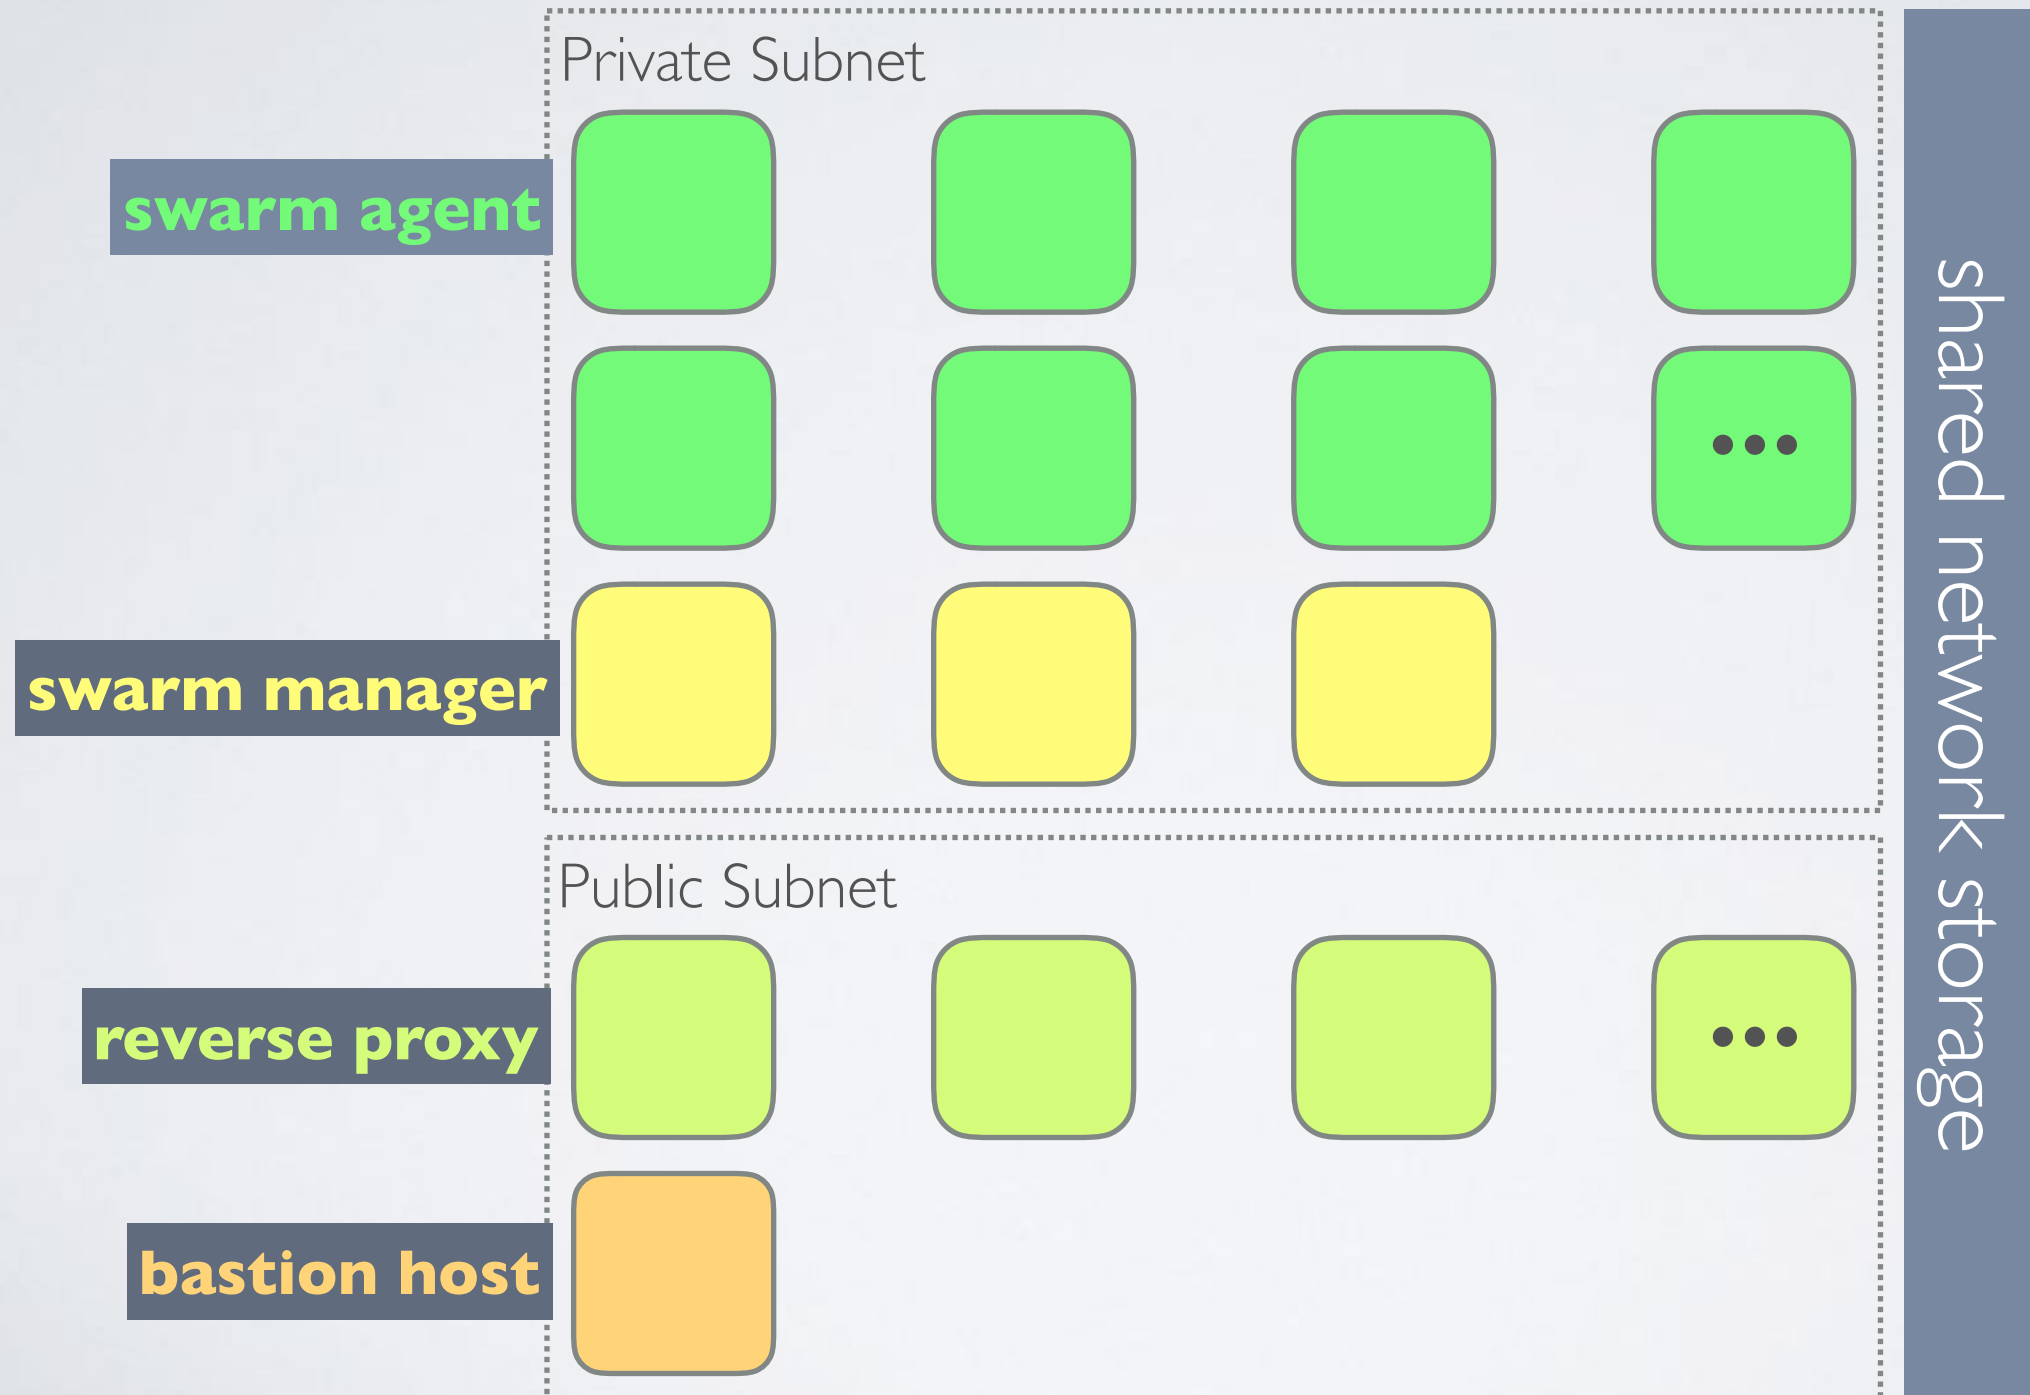

ARCHITECTURE

Goals

- Highly available
- Highly secure
- No human interaction

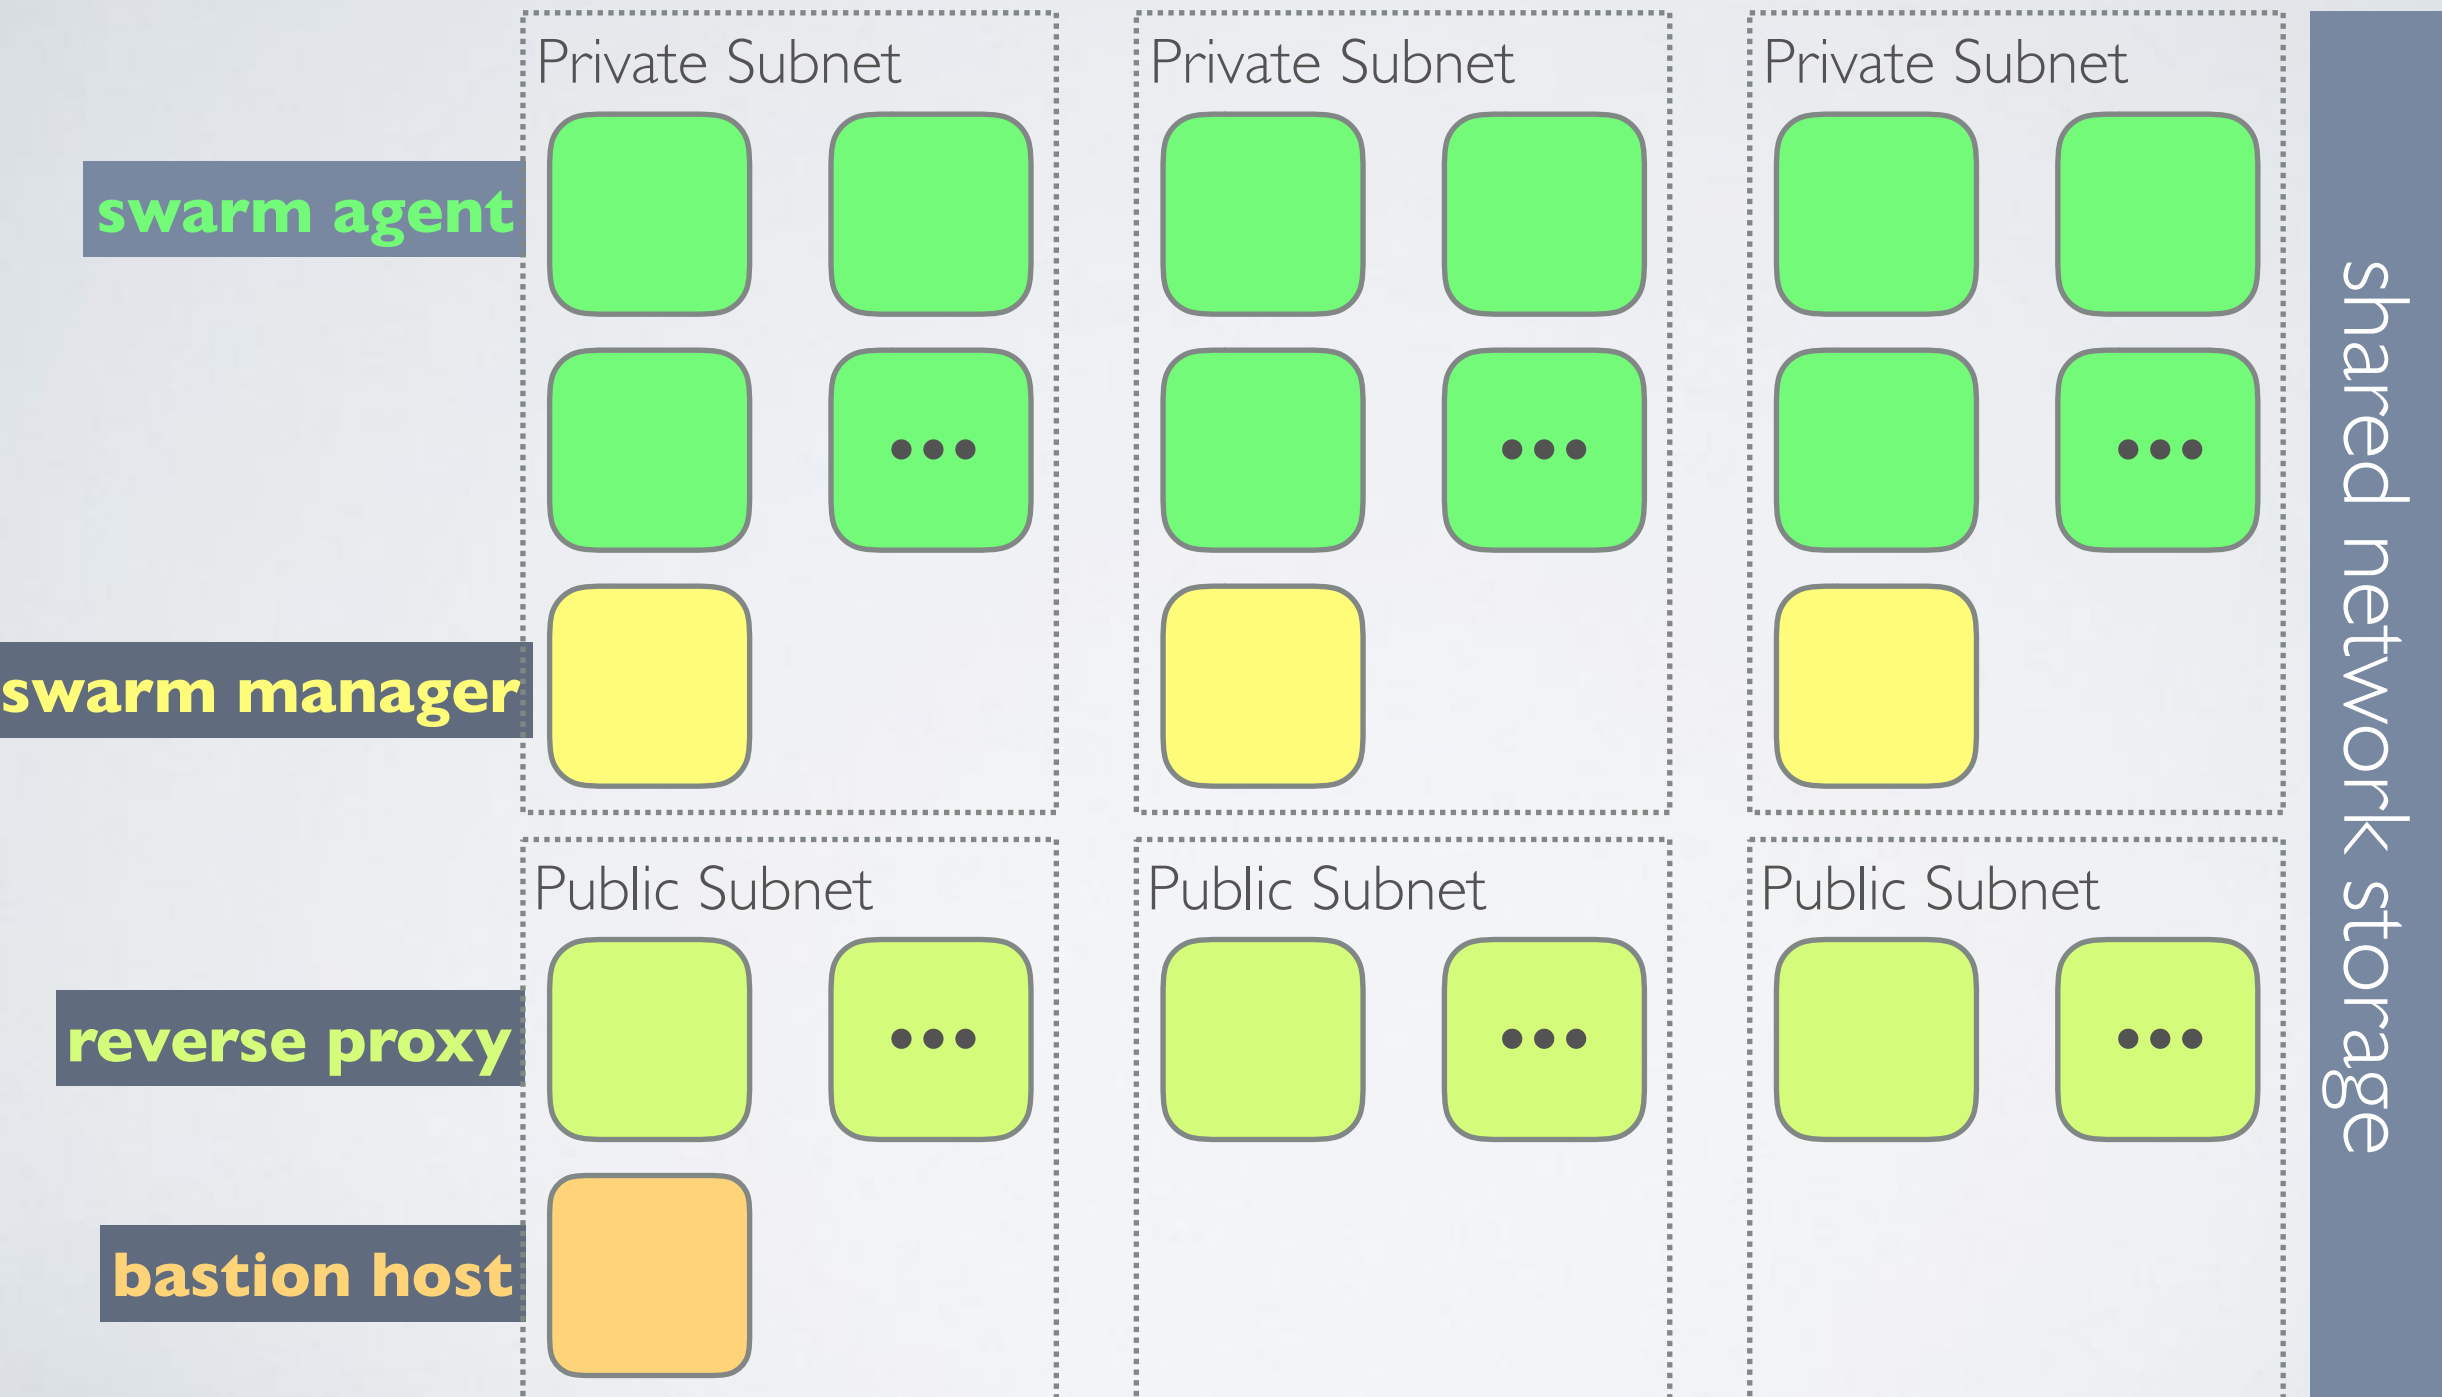

ARCHITECTURE

Single Availability Zone

ARCHITECTURE

Multiple Availability Zones

ARCHITECTURE

High Availability

- Multi-AZ cluster of manager nodes
- Autoscaling groups for instance-level persistence
- Docker Swarm scaling and rescheduling policies for container-level persistence
- Autoscaling groups and Docker Swarm scaling policies for reacting to load

ARCHITECTURE

Security

- Single point of access to the cluster
- Multi-factor authentication
- VPC security groups
- Fine-tuned IAM access policies for users and services
- Secret key storage

ARCHITECTURE

Tools: Packer

- Packer is a tool for creating machine and container images for multiple platforms from a single source configuration.
- <https://www.packer.io/>

ARCHITECTURE

Tools: Terraform

- Terraform provides a common configuration to launch infrastructure
- <https://www.terraform.io/>

ARCHITECTURE

Tools: Docker Swarm

- Docker Swarm is native clustering for Docker. It turns a pool of Docker hosts into a single, virtual Docker host.
- <https://docs.docker.com/swarm/overview/>
https://hub.docker.com/_/swarm/

ARCHITECTURE

No Human Interaction

- Infrastructure as code
- Full logging
- Full automation
- Self-healing

ARCHITECTURE

Ongoing Work

- Log aggregation
- Deployment strategy
- Testing

ELASTICSEARCH

- Central store for all analytics, logs, and metrics
- Visualize data with Kibana
- <https://www.elastic.co/>
<https://www.elastic.co/products/kibana>

AWS LAMBDA

- “Serverless computing”
- Automatically trigger from other AWS services
- Trigger using HTTP with API Gateway
- <https://aws.amazon.com/lambda/>
<https://aws.amazon.com/api-gateway/>

REVIEW

- Infrastructure goals, architecture, and tools
- Elasticsearch and Kibana
- AWS Lambda and API Gateway

QUESTIONS
